

QR Codes for BSUG patient leaflets

Please laminate and keep in clinic rooms.

You can simply ask your patient to direct their smartphone in camera mode onto QR code. In most cases, the phone will then offer to open the relevant document so the person can then just click and open. This will open the relevant leaflet on patient's phone instantly (provided phone has reception or wifi connection).

This can hopefully reduce the need for you to print many leaflets and also ensures the leaflet you have is the most up-to-date from BSUG as we will endeavour to keep the same codes for each leaflet even if the content is updated.

Please check the News section (QR code below) of the BSUG website for any new leaflets (eg. currently being developed SNM leaflet) which may not have QR codes yet.

Pelvic Organ Prolapse

Prolapse of the vaginal wall

Anterior repair
